

novaResourceSync™

Question	Answer
Does novaResourceSync support Notes and Google recurring events?	Yes
Does novaResourceSync support Notes and Google all day and multiple day events?	Yes
Does novaResourceSync support Google recurring events with no end date?	Yes. novaResourceSync will push to Notes all instances of an endlessly recurring event for at least one year.
Does novaResourceSync support rooms or resources that have been disabled in Notes?	Yes. The resource's Google Calendar will not show the resource as busy while it is disabled in Notes. However, novaResourceSync will notify the user that the room or resource has been disabled in Notes and will delete the event from the resource's Google Calendar.
Does novaResourceSync support Notes rooms or resources with limited advance reservation?	Yes. novaResourceSync supports Notes rooms or resources that can only be reserved for a given number of days in advance. It also supports Notes rooms and resources that can only be reserved through a specified date. The resource's Google Calendar will show the resource as busy for one year from the date that the resource becomes unavailable.
Does novaResourceSync support Notes rooms or resources that are available only on certain days of the week at certain times?	Yes. The resource's Google Calendar will not show the resource as busy for the days of the week and times that the resource is unavailable in Notes. However, if the user creates a Google reservation for a time that the resource is unavailable in Notes, novaResourceSync will notify the user that the resource is unavailable and will delete the event

	from the resource's Google Calendar.
Will novaResourceSync export Notes rooms or resources to Google?	Yes. novaResourceSync allows you to provision Notes rooms or resources in Google.
Will novaResourceSync import Notes rooms or resources from Google?	No. novaResourceSync does not create Notes resources. However, you may create a Notes resource manually and map it within novaResourceSync to an existing Google resource. The new Notes resource will sync with the existing Google resource.
Are synchronizations in novaResourceSync real time?	No. novaResourceSync relies on Lotus Notes scheduled agents which run every five minutes. With proper configuration of novaResourceSync you can achieve close to real time (within a few minutes) however the tool is not designed to be a real time sync process.
Is there a potential for double bookings?	No. novaResourceSync has been architected to prevent double bookings. If a Notes user and Google user book the same room at the same time the Google user will receive a declination and the Notes user's reservation will be accepted.
Do I need a dedicated server to run novaResourceSync?	We recommend a dedicated server (or virtual machine) in most occasions as the tool does have fairly specific Domino Server Document setting requirements and if you have many rooms and/or many events within those rooms the Sync agents will be running often.
I would like to use your novaConnect tool along with novaResourceSync. Can I place novaConnect and novaResourceSync on the same dedicated server?	Yes. novaConnect and novaResourceSync are designed to 'play nice together' and can be collocated on the same server.
